Timeless, reduced, consistent

Consistent variety of solutions, the greatest possible reduction in the design: LS ZERO transfers the design constants of the classic LS 990 range to a new flush-mounted interpretation. Installed in furniture, brickwork or drywalls, LS ZERO creates a level plane in any type of installation between the surface and the operating element. Furnishing concepts thus make a compelling and creative statement. All the requirements for a modern electrical installation can of course be implemented with LS ZERO.

Available from April 2016

## LS ZERO installed in furniture

Part of furniture design

With LS ZERO, the electrical installation is now part of the creative element of furniture design: thanks to the fully flush-mounted installation, the furniture and switches are interlinked in an almost seamless transition. This creates new possibilities for modern architecture and interior design. There is a trailer available under jung.de/lszero which clearly illustrates the individual steps required for the installation.

Using the drawing data provided by JUNG, the furniture maker can work to the nearest millimetre. After milling the cut-out conventional cavity wall boxes are placed in position for the flush-mounted installation of the required insert, LS ZERO frame and cover.

## LS ZERO: Brickwork and drywall installation

Reduction as a statement

When installed in brickwork and cavity walls, a unique, harmonious and level installation is achieved with LS ZERO - using conventional device boxes and a uniform, narrow frame. Using a special plaster frame, a consistent fit and a bonded connection is also achieved.*

There are trailer available under jung.de//szero which iliustrate the individual steps for the installation incluaing all the processes involved. "The material of the plaster frame bonds with the conventional plaster.

## Alternative: 3 mm profile height

 Alternatively, there is a variant of LS ZERO available with a 3 mm profile height. This is available with a 3 mm profile height. This isideally suited for example to walls with wallpaper/panelling. The design frame overlaps the edge of the wallpaper by a minimal amount $(1.5 \mathrm{~mm})$ and therefore produces a harmonious visual effect. This variant is also hickness of 12.5 mm .

## Smart Visu Server

Visualisation solution for the smart home

The Smart Visu Server is the optimum solution to visualise a KNX installation both quickly and cost-effectively. The compact device for wall or rail mounting certainly packs a punch: simply launch the integrated commissioning interface SV Control via the web browser and create the visualisation following an intuitive process.

The operation is carried out via the clearly structured user interface Smart Visu Home, whereby the user can carry out own settings or actions. The device has been conceived for mobile control via smart devices - independently of the operating system - and thus provides an added plus in terms of convenience and flexibility.
Already available

## SV Control

Simple commissioning with the Smart Visu Server

SV Control is the integrated，web－based commissioning tool for the Smart Visu Server and enables the convenient creation of a KNX visualisation－via computer，laptop or smart device， independently of the operating system．

## ETS import

The first step is the import of the existing installation from ETS with an OPC file．The connection to KNX is carried out via a KNX IP interface or a KNX IP router．The group addresses are clearly displayed in a sortable list．

## Area G／24 new It．Bathroom Patio Itr．

## Create areas

The next step is to create the areas．These can be rooms or groups such as favourites or functions．Once the areas have been named individually，an appropriate symbol can be assigned from the library．The interface can therefore be adapted to requirements．Up to 24 areas can be created．

| $\cdots \times$ | $\square$ | trasem mome | 0 |
| :---: | :---: | :---: | :---: |
| ［ | － | － | 。 |
| 䢒mation | ＋ | tomm | － |
|  | ＋ | Emmos | － |
| Mimom | － | 合mmand | － |
|  |  | بram |  |
| $\delta^{\text {comem }}$ |  | 今 mman |  |

## Create functions

Functions are now created in these areas．After selecting the function type（e．g．＂Motor＂for blind control），the relevant symbol can be taken from the library．The corresponding data points can be connected from the imported group addresses． 240 functions with a tota of 1,200 data points can thus be created．

## Assign functions

The different functions can now be assigned to several areas in parallel if required：the function＂Reading light＂ can for example be integrated both in the＂Lounge＂and ＂Reading＂areas and then retrieved via these areas． These assignments can be modified at any time．

## Save areas and functions

All the required areas and functions are saved once they have been created and assigned．This concludes the creation of the visualisation．A backup can also be stored on the computer－for security reasons for the customer or as a template for other projects（such as several residential units in an apartment building）．

## Visualisation

If the visualisation has been created and saved，it is immediately visible and can be operated via the＂Smart Visu Home＂on the terminal device of the user．If required， changes，adaptations and extensions can of course be carried out at any time．

## Smart Visu Home

Convenient operation with the Smart Visu Server

The web-based Smart Visu Home provides the user with a clearly structured, graphical user interface which he can use to operate all the relevant KNX functions as well as the Philips Hue colour light system via his smart device. In addition, he can carry out his own settings (actions) such as time-controlled switching operations, conditional events or status displays.

## Modular software

Open for the future

## PHILIPS

hue "mix
The architecture of the Smart Visu Server software has been created so that it keeps pace with the requirements of modern life. From home entertainment to intelligent fridges, there is an increasing number of smart devices in a modern household which enable connectivity to the building system. The Smart Visu Server has therefore been consciously created as an open system. It is possible with regularly released updates to add technologies and protocols as modules. The server thus already supports the Philips Hue colour light system in its factory state. As soon as a Hue bridge with taught-in devices is detected in the network, the operator interface can be accessed for the integrated and convenient control of the lamps in an area.

## Smart Control $7^{\text {" }}$

Control panel for the complete building system

As a control panel, the new Smart Control 7" takes over the control of various home automation systems using apps. Both eNet and KNX installations as well as door intercom functions can be operated via a single device (in connection with the Siedle Smart Gateway) - either separately or in parallel.

Thanks to the JUNG Launcher, all the available applications are clearly displayed and can be launched simply by touching the relevant icon. Due to the open operating system, the Smart Control $7^{\prime \prime}$ can also be extended by further apps at any time.

Already available

The Smart Control $7^{\prime \prime}$ can be installed either vertically or horizontally, depending on its intended purpose and individua preference. With its elegantly designed cover available in aluminium or black, the panel makes a great impression on the wall under any circumstances.

The particularly flat shape of the Smart Control $7^{\prime \prime}$ emphasises its sleek appearance: the design cover only protrude by around 3 mm .

## JUNG Launcher

The entire smart home on a single screen

Multi-functional user interface: JUNG Launcher displays a summary of all apps that are installed on the Smart Controls. The applications are directly selected by simply touching the appropriate icon. All apps are running in parallel, so you can switch between them at any time. Apps may be added at any time.

The Smart Controls for wall installation are available with screen diagonals of $178 \mathrm{~mm}, 256 \mathrm{~mm}, 396 \mathrm{~mm}$, or 470 mm .

## Facility Pilot Server

App for the JUNG Launcher

KNX installations for e．g．commercial or private buildings with individual adaptations may be displayed and controlled in an ideal way using the Facility Pilot Server．The various contents are clearly structured and are the basis for ease of operation．

The visualisation is through the uniform JUNG user interface that allows the various features to be controlled in a logical and intuitive manner．Optionally，a freely configurable user interface may be usec

## Smart Visu Server

App for the JUNG Launcher

For a KNX standard installation in a conventional detached house or freehold flat，the Smart Visu Server is used for visualisation．In the Smart Visu Home menu，the user may configure his／her own settings and actions such as time－controlled switching operations etc．

Also，the Smart Visu Server is used to operate the system．The clearly structured menu allows the user to individually se， functions and actions．

The Smart Visu Server for wall or
mounting rail installation．

## eNet

Apps for the JUNG Launcher

Based on the connection to the eNet server, all eNet functions and scenes are displayed using the browser-supported eNet Home visualisation that is implemented in the server. Alternatively, visualisation may be provided by connecting to the eNet IP gateway and using the associated app. The logical structure that is based on rooms, functions, and favourites ensures good overview and intuitive operation.

eNet is intuitively displayed and controlled through the Launcher: touch the appropriate icon to select a room or function/scene.

## Door communication

App for the JUNG Launcher

By linking this system to the Siedle Smart Gateway, the Smart Controls become video communication stations for the door communication - displayed on the JUNG Launcher. The clearly structured user interface ensures easy and convenient operation. Moreover, the large and clear display helps increasing the security at a glance.

More security: for monitoring all entry doors, a video/audio connection may be established at any time.

eNet may also be displayed and controlled through the Launcher by alternatively connecting to the eNet IP gateway and using the associated eNet app.

## F 50 KNX Compact room controller

Variety of functions, intuitive operation

New room controller for the KNX F 50 family: the KNX compact room controller appeals by intuitive operation and two built-in temperature controllers. The large backlit LCD clearly shows the most important values and functions, irrespective of the viewing angle. Depending on the respective functions, the button icons shown on the display may be individually selected during programming. Buttons labelled by means of the Graphic Tool further assist the user in assigning functions; the same applies to the RGB status LEDs. Push-button sensor or controller functions may be assigned to each of the room controller buttons.

Already available

## Smart temperature contro

The F 50 compact room controller provides four options to determine the actual temperature: firstly, by means of the built-in temperature sensor; secondly, by means of the temperature sensor of a connected extension module; thirdly, by means of an external sensor that may be optionally connected; and fourthly, by means of the temperature sensor of any other KNX device using a 2-byte float message. Moreover, the actual temperature may be obtained from a combination of these sources and shown on the display: using the two built-in temperature controllers, the temperature of two rooms may be exclusively controlled in parallel. This way, not only the desired temperature can be achieved in the room in which the compact room controllers are installed, but also e.g. in the hallway using a connected extension module - easily, quickly and cost-efficiently.

The KNX Compact room controller is available in a 2-gang and 4-gang version. Available in the same design as of the AS, A, $C D$, and $L S$ ranges, it harmoniously fits to the remaining electrical installation.

Flexible with extension modules

By connecting extension modules to the compact room controller, functions may be added to the unit as required. What is typical of the F 50 family: the extension modules may be installed in a distance of up to 30 m . Thus, the KNX functions may be easily and cost-efficiently operated from an adjacent room including stand-alone temperature control.

## KNXRF

Wall-mounted transmitters in shape of F 40 and F 50

KNX RF wireless standard in the JUNG design: wall-mounted transmitters in F 40 and F 50 family ideal for upgrading or extending existing KNX systems. The JUNG KNX wall-mounted transmitters bypass any structural conditions, where no bus cables can or should be laid. This way, the especially flat devices can be flexibly placed within the room, since they are simply affixed to plaster, wood, or glass. Residents can then conveniently regulate their room functions at the touch of a button.

For the F 50 version, an additional temperature sensor for capturing the actual temperature is installed in the room. For allocating functions to buttons, these can be individually labelled using the JUNG Graphic Tool. Addressing, parametrising, and diagnosing are easily carried out using the KNX wireless USB flash drive or, optionally, through the KNX USB data interface. The KNX bus is connected to the wireless system using the JUNG media coupler.
Available from September 2016

The new KNX wall-mounted transmitters are available in the AS, A, CD, and LS ranges.

The JUNG media coupler with The JUNG media coupler wilt connects the KNX and wireless systems. It is the interface between the wired and radio controlled products. When the unit is not connected to a bus wer supply on it works as a repeater.

Alternative to the wall-mounted radio transmitters: using KNX radio hand-held transmitters mobile operation is by remote control. There are two version available with a choice of two or fisplay channed by the coloured LED.

## KNX push-button sensors F 40

Universal design with temperature sensor

The new KNX universal push-button sensors F 40 bring more convenience to intelligent room temperature control: in addition to the options for operating the different KNX functions, the latest generation of push-button sensors have an integrated temperature sensor to measure the actual temperature value. Installed accordingly in the room, the sensors can relay this value to a KNX motor valve drive and thus support energy-efficient room temperature control.
Available from May 2016

## KNX motor valve drive

With integrated room temperature controller

Smart and energy-efficient: the new KNX motor valve drive with an integrated temperature sensor for automatic room temperature control. The discretely designed device, which can be painted over, has an input which can either be used as a binary input or for the connection of an external temperature sensor. The new universal push-button sensor F 40 is also suitable for extended temperature detection and reports the temperature from a separate location in the room - which in turn optimises energy-efficient heating.

## KNX 6-gang binary input

Rounding off the temperature control

Optimised for connection to 230 V and low voltage AC/DC: the new KNX 6-gang binary input. Integrated in a sophisticated KNX room temperature concept, it ideally has a window contact connected to it so that the window status can be sent for example to the KNX motor valve drive. This guarantees that the room temperature is lowered accordingly when the room is ventilated and heat is not lost through the window. An integrated pulse and operations counter rounds off the device functionality.
Available from July 2016

## KNX Presence detector mini

Unobtrusive visual appearance, focused detection

Unobtrusive, compact, precise: The KNX Mini Standard and Universal presence detector is featured by the following characteristics. It is designed to control lighting systems, room thermostats, and other electrical loads as needed. The striking feature is its compact design offering several ceiling installation options: Depending on the particular room situation, the unit may be installed in a false ceiling, on the surface, or in a commercial flush wall box. When flush-mounted or installed in a false ceiling, the unit is hardly identified at the ceiling and thus does not affect the interior design of the room.
Focused detection, e.g. above office working places, in entrances or hallways, is a functional benefit. Depending on its configuration, the unit may be used as a ceiling observer, presence detector, or in signalling mode. Using software to parameterise several devices in parallel with several devices set up as satellite units being combined with a master device enables the detection area to be extended as required.

The five functional blocks of the universal version work independently of each other and can be switched between day and night operations. Each functional block can be configured as required for presence detector, ceiling observer or signalling mode (so that different tasks can be fulfilled with only one device that operates in the different areas of the room). If required, regulation of lighting is also possible depending on daylight. Additionally the three PIR sensors can be individually analysed as required by software. The setting and operation can optionally be carried out through infra-red remote control. Already available

The third type of celling installation is the sur-ace-mounted option. Here, too, JUNG offiers s well as a surface cap to give it a consistent appearance

The most discreet installation type is definitely the clamp assembly in a false ceiling. The sprin clips ensure fastness, and only the lens and the narrow design ring can be seen from below.

Flush-mounted installation of the presence detector mini or the brightness sensor is carried out by means of a separate flus mounting set in an off-the-shelf DIN 4907 flush wall bo

Compact design, slim dimensions: convincin with a decent style.

## KNX Brightness sensor

With the KNX brightness control with integrated brightness sensor, the interior light control depends on the amount of daylight present. It has the same three options for ceiling installation as the presence detector mini. The brightness sensor with its harmonious proportions, "invisible" adjustment elements and sensor technology features an unoptrusive design.

## Guest Room <br> Management System

JUNG KNX technology meets Assa Abloy hospitality

A strong alliance for increased comfort and convenience, security and energy efficiency in the hospitality sector of the hotel industry: through Assa Abloy, the world-wide leading manufacturer and supplier of locking solutions, a progressive hotel locking system is made available with an electronic key card and Visionline software from VingCard. With an interface connection to the JUNG KNX system, there are numerous benefits for automation and operational comfort for both hotel operators and guests.

Interface to the world of access control

With a new plug-in, the JUNG Facility-Pilot offers an interface to the Visionline software. While the future-proof KNX technology in the hotel room provides intelligent functions in an intuitive operational concept, the link with the Visionline software from VingCard creates added value as regards comfort, security and energy efficiency - starting as soon as you enter the room. "Greeting scenes" can be implemented when you open the room door with the key card: a comfort lightscene is switched on, the curtains are opened, the air conditioning system is triggered in comfort mode etc. Special profiles can also be created and triggered for the staff e.g. to create the optimum lighting conditions for cleaning the room. A message can also be sent to reception when the room door is not closed - the possibilities are endless.

Assa Abloy at the door, JUNG in the room - the coupling of Vision Line and the KNX Facility-Pilot takes place via the plug-in. The advantages are obvious: Accurate control for for the hotelier, maximum comfort for the guest.

## Synergy embodied

The combined strength of two specialists

When the expertise of two specialists combines, new possibilities emerge. JUNG as an authority on building system technology and aesthetic switch design is collaborating with Siedle as an expert in door and building communication.

Ultimately the components from JUNG and Siedle speak the same language: equipped with Siedle system technology, the JUNG indoor video and audio stations in a variety of switch designs communicate perfectly with the door stations from Siedle. For seamless communication and the best possibilities for trade, commerce and architects.
www.neuesynergie.de/en

NEUE SYNERGIE

## JUNG Indoor station

Equipped with Siedle system technology

## Display in large format

At a glance: with the new, large $2.7^{\prime \prime} / 70 \mathrm{~mm}$ display for the indoor
video stations from the CD and LS ranges, the resident can now see even better who is standing in front of the door. Practical: the smaller displays which have be exchanged as needed without requiring any configuration.

The JUNG indoor stations are impressive due to their functionality and visual effect. There is not only an extensive design selection available; they are also extremely flexible due to their modula construction. Video, audio and push-button modules can be mounted together in a multiple frame or separately in single frames. When combined with the abundance of JUNG design ranges, there is a wide variety in terms of material, colour and shape. When the expertise of two specialists combines, new possibilities emerge. JUNG as an authority on building system technology and aesthetic switch design is collaborating with Siedle as an expert in door and building communication.
$\qquad$

## Video station

See who is standing in front of the door: the coloured TFT screen ( $2,77^{\prime \prime} / 70 \mathrm{~mm}$ ) gives you a clear look at the visitor. Hands-friee talking with best loudspeaker quality, eleven difi-
ferent signal sounds and convenient push-button operation are also a standard feature of the video indoo station.

Audio indoor station Clear door communication: top-quality sound and optimal loucspeaker quality (call volume incrementally adjustable up to $92 \mathrm{~dB}(\mathrm{~A})$ between residents and visitors. Hands-free talking and door opening at the touch of a button makes it easy to operate.

| SIELLE Systemtechnik |
| :---: |
| lnholone |

Standard indoor station The indoor station for compact surface installation: call, speak, open the door the standard version eloquently fulfils iltermal calls, privacy function, eleven difierent call sounds and call volume adjustable to five levels up to $83 \mathrm{~dB}(\mathrm{~A})$ ound off its features.

## Door communication with the Smart Control 7"

Function as a video indoor station

The new JUNG Smart Control 7" becomes a video station for door communication via the Siedle Smart Gateway. The clearly structured interface enables simple and convenient operation - and the large, clear display provides increased safety at a glance. Via its integration in the JUNG Launcher, the application has the well-known JUNG design at its disposal. The Smart Controls 10", 15" and 19" can of course also be used here, depending on requirements and spatial conditions.

## Convenience

Drop-down list of the doors: a video/audio connection can be set up at any time to monitor all the entrance doors. Before establishing voice communication, the resident can see who is standing in front of the door. It required, the microphone on the panel can be muted so that the visitor cannot hear what is being said in the house. The ringtone on the panel can also be switched off.

Security
Increased security: each time a call is made at the door, an image of the visitor is automatically recorded and saved. Live images from the camera can be retrieved at any time and an image can be saved manually if required in the memory. You can therefore detect at a glance what is happening in front of the door.

## Compatibility

The JUNG Smart Control $7^{\prime \prime}$ is linked to the outdoor stations via the Siedle Smart Gateway. The In-Home bus serves as the basis and fundamentally guarantees the compatibility between JUNG indoor stations and Siedle door stations.

## Movement/Presence detector

Two operating modes in one device

## Presence detector function

When it is used as a presence detector, the device provides energy-efficient lighting e.g. in the workplace. At a mounting height of 3 m , a detection range of $360^{\circ}$ is covered with a diameter of 12 m . Even the smallest move ments - such as moving the mouse while working at the PC - are detected

Movement detector function
When it is used as a movement detector, the device has a detection range of $360^{\circ}$ with a diameter of 20 m (at a mounting height of 3 m ) This extensive detection range is perfect for use in corridors/hallways. In this mode, the lighting is also switched dependent on the brightness which in turn saves energy.

A compact device with a twin function: the new movement/presence detector for automatic switching of the lighting, dependent on brightness and movement. It is persuasive due to its excellent detection properties ( $360^{\circ}$ detection range) at mounting heights up to six metres.
The movement/presence detector has three independent PIR sensors for movement detection. Each of these sensors is assigned to an individually activated range (each with a detection angle of $120^{\circ}$. In addition the detection range can be considerably extended by grouping up to five devices. It is therefore possible to adapt the device to the room conditions or to the specific application. Due to the integrated brightness sensor, the device can also be used as a twilight switch.

Already available

Carrying out the settings at ground level: two IR remote controls increase the level of convenience when operating the presence detector. The user can activate different functions with his remote control (switching on/off, automatic mode and presence simulation etc.). The installer carries out the commissioning beforehand using a remote control that can be pur chased separately.

36

## ZigBee wall and hand-held transmitters

Create atmospheric light scenes

Re-experience light control: the JUNG ZigBee hand-held transmitters and wall transmitters in switch design control modern, radio-controlled illuminants according to individual wishes. Atmospheric light scenes may be easily configured according to your personal preferences and conveniently operated. So the meal can be prepared in the kitchen that is illuminated daylight white, while the light above the dining table is already dimmed warm white. RGB colour light effects skilfully place emphasis on other areas - matching each atmosphere and ambience. Available from July 2016

## Switching/Dimming

Control light intensity as desired by pressing buttons - according to the particular situation.

Colour values
Control RGB colour light for each room and set tones in lighting

## Colour temperature

Use the Tunable White feature to se warm, neutral, or daylight white.

Scenes
Use programmed scenes to retrieve your personal favourite setups.

Illuminant teach-in is conveniently carried out through "Touchlink" by pressing buttons at the unit. Additional functions such as "Factory Reset" are selected using shortcuts as well. This way, also the second operating level for advanced parametrisations (e.g. change of colour temperature) is accessed.

## The following

illuminants/manu-
facturers support the
ZigBee Light Link
protocol:
Philips Hue
Osram LIGHTIFY
LG Electronics
General Electric Company

The flat ZigBee wall transmitters are simply affixed in positions where yo eed them - on plaster, wood, or glass, ideal for retrofiting

## DALI potentiometer

Brightness and colour temperature control

## Switching

The connected DALI luminaire is switched by pressing the rotary button.

The new Power DALI potentiometer for the manual operation of luminaires with a DALI interface, including the option to adjust the colour temperature (tunable white): the device uses the well-known operating principle of a rotary dimmer. The switching, dimming and regulation of compatible luminaires is possible for up to 26 DALI devices. A maximum of four devices can be combined to increase the number of DALI devices and to guarantee operation from different locations. This technology is typically used in offices and commercial buildings. The standard covers for rotary dimmers in the AS, A CD, LS and SL ranges are used for the Power DALI potentiometer.
Available from May 2016

DAL
Colour temperature control from DALI device type 8 for tunable white in accordance with IEC 62386-209.

## Tunable white

Warm, neutral or daylight white as required: the colour temperature is adjusted by pressing and turning the knob at the same time. The limits of the colour temperature range of the luminaire can be set directly on the device itself which enables precise control.

## USB charger

Increased charging power

Optimised replacement for the well-known USB charger: The new unit provides an output current of up to 2100 mA . This current is sufficient to quickly and safely charge mobile devices of the latest generation. The output current is either completely delivered to one USB socket or distributed across both USB sockets as necessary. The new USB charger is available in all JUNG ranges and ideally suited for retrofitting.
Available from May 2016

## F 50 eNet wall transmitter

Flat wall transmitters in a new look

Operate eNet in a new design: the new flat wall transmitters rely on the well-known F 50 concept which provides buttons on the left-hand and right-hand sides and a large-area cover in the centre. This cover is available either as a transparent labelling area or as a design cover matching the button colour. The buttons may be labelled using the Graphic Tool which helps identify the buttons and associated functions so that functions and scenes can be intuitively controlled by pressing buttons. The 1-gang to 4 -gang eNet wall transmitters are available in the AS, A, CD, and LS design ranges Commissioning is performed either manually between transmitter and receiver or through the eNet Server, which is the more convenient way. Tip: the wall transmitters are featured by a battery life of up to 10 years. After that period of time, the commercially available battery is easily and quickly replaced: simply remove the design cover, replace the battery, and re-install the cover - done.
Available from September 2016

The flat eNet wall transmitters
The fiat eNet wall transmitters
are simply affixed in the positions are simply a fixxed in the posit
where you need them - on plaster, wood, or glass.

## eNet with the 7" Smart Control

Visualisation and operation

With the $7^{\prime \prime}$ Smart Control unit, a new, convenient control is available also for the eNet wireless system: the JUNG Launcher is used to invoke the connection to the eNet server or eNet IP gateway, respectively. The user simply needs to touch the screen to intuitively control any eNet functions or scenes through the visualisation. The Smart Control $7^{\prime \prime}$ touchscreen display provides enough space. Moreover, the JUNG graphical user interface is clearly structured for ease of operation.

## Secure Remote Access

Connected to the eNet Smart Home from everywhere

Using a JUNG server located in Germany, JUNG offers secure access to eNet building technology from one source. The user creates a MyJUNG account at www.jung.de and, using this data, activates access to the eNet server once only. Secure remote access is available from that moment on. This way the user can check at a glance, and from any location, whether he has left the lighting on or he can lower the shutters at home when it gets dark. Of course, several JUNG eNet Smart Home systems can be managed by remote access if required. For intuitive operation, the uniform JUNG interface is also available to the user. Here he/she can operate all functions simply and safely as usual
Using the remote access requires the JUNG eNet Server to be implemented - the smart control centre for the system. Purchase of the JUNG eNet Server includes 24 months of free use of secure remote access.

## eNet

## eNet Allianz for More Comfort and Security

The market for smart home solutions is booming. Several million households are expected to use smart networked technology by 2020. We want the specialist distribution partners to benefit from this situation. We provide the end customer with reliable Made in Germany solutions. We have therefore
eNet is designed as an industry standard for specialist craft businesses. Leading brands in the specialist building technology distribution are invited to join this industry standard. This will enable solutions across brands and trades as well as electrical craft businesses to play a key role in modernising existing buildings and erecting new ones.

## BACH MAN <br> BRUMBERG <br> etherma GIRA <br> 可NG <br> SuFiont

## SMART HOME FROM

MASTER CRAFISMEN
A GOOD BASIS FOR THE NETWORKED HOME

For creating their smart home, many end customers want to get professional advice and reliable service. Within the eNet Allianz association, we count on the performance of expert craft businesses. Together, we actively want to shape the smart home market. Join us at: www.enet-allianz.de
eNet is the bidirectional wireless system for smart networking and control of building technology. Based on this technology, our products and solutions may be easily incorporated and controlled - even from remote when you are on your way, using the eNet server. eNet is easily installed and retrofitted.

## AS range

SCHUKO ${ }^{\circledR}$ socket 16 A / 250 V ~
with pilot light (green LED) ref.-no.: 193-LED GN
with child protection (shutter)
Screwless terminals for wires up to $2.5 \mathrm{~mm}^{2}$
Without claws: ref.-no. with additional "N", e.g.: .. 1520 N..
Supporting frame, claws and claw screws are integrated into the earth protection.
Thermoplastic (breakproof) high-gloss

average life approx. 100,000 h
SCHUKO ${ }^{\circledR}$ socket with RCD (residual current device) 16 A / 250 V ~
according to DIN EN 61008-1 (VDE 0664-10) and DIN EN 61008-2-1 (VDE 0664-11)
Rated residual current: 30 mA
with child protection (shutter)
Screwless terminals for wires up to $2.5 \mathrm{~mm}^{2}$
The SCHUKO socket with RCD is suitable to replace sockets in older installations.
Sockets that are connected to the RCD-protected output terminals (L'N) are likewise RCD-protected.
The electrical installation up to the SCHUKO® socket with RCD is not protected.
The socket can also be switched on and off manually, using the built-in switch.
Thermoplastic (breakproof) high-gloss

## Video module 2.7"

## Product characteristics

- TFT colour monitor
- Screen diagonal 70 mm (2.7')
- $320 \times 240$ pixels
- Brightness and colour setting
- Video connection cable (black, 220 mm) included
- Operation only in combination with universal push-button module and audio module
for $C D$ range

## Door communication

_S range

available from September 2016

## Ref.-no.

eNet radio transmitter modules F 50

## Intended use

- Radio sensor for transmission of switching, dimming, blind movement and scene commands
- Operation with radio actuators from the eNet system
- Mounting on appliance box according to DIN 49073, screw fixing on walls or adhesive fixing on smooth, even surfaces (glass)

## Product characteristics

- Two adjacent buttons each belong to one channel
- Display of the actuator status for status poll by a green LED per channel
- Display of the transmission status by a red LED
- Switch-on brightness of dimmer actuators can be saved
- Battery-powered device (battery compartment accessible from front)
- Signalling of transmission errors can be switched off
- Manual commissioning

## Technical data

## ZigBee radio hand-held transmitter

4-gang
anthracite
ZLL HS 4

## Intended use

- ZigBee hand-held transmitter for transmission of switching, dimming and scene commands
- Control of colour temperature (tunable white), colour value (RGB) and colour saturation, depending on the illuminant
- Operating with illuminants that support the ZigBee Light Link Protocol, such as Philips Hue or Osram Lightify
- Also serves as a commissioning tool for installed wall transmitters and new ZigBee illuminants

## Product characteristics

- Switching and dimming (1 channel)
- Saving and calling-up of up to 6 scenes
- Teaching in illuminants with "Touchlink"
- Reset of illuminants with "Factory New"
- Reset of hand-held transmitter with "Factory Reset"
- Parameterisation of colour value ("Colour Cycle"), colour saturation and colour temperature ("Tunable White") for all or individual illuminants
- Function "Commissioning" (commissioning tool)
- Status indicaton with LED
- Battery-powered device

## Room controller display compact module 4-gang

for cover kit 4-gang, complete, ref.-no.: A 504 TSA ..
can be extended by means of a room controller extension module, ref.-no.: A 5178 TSEM
can be extended by means of a push-button extension module, ref.-no.: A 509.. TSEM
A 5194 KRM TS D

## Room controller extension module 2-gang

for cover kit 2-gang, complete, ref.-no.: A 502 TSA ..
for the extension of a room controller module (ref.-no.: A 5192 KRM TS D, A 5194 KRM TS D)
with a second room temperature control unit
Intended use

- Operation of loads, e.g. light on/off, dimming, blinds up/down, brightness values,
temperatures, calling up and saving light scenes, etc.
- Measurement of room temperature
- Extension for room controller modules (.. 5192 KRM TS D, .. 5194 KRM TS D)
- Installation in wall box according to DIN 49073
- Cable lenghts: max. 30 m , cable type: $\mathrm{J}-\mathrm{Y}(\mathrm{St}) \mathrm{Y} 2 \times 2 \times 0.8 \mathrm{~mm}^{2}$
Room controller display compact modules F 50
recommended mounting height: 1.5 m

## Intended use

- Measurement and feedback control of the room temperature
- Operation of loads, e.g. light on/off, dimming, blinds up/down, brightness values, temperatures, calling up and saving light scenes, etc.
- Installation in wall box according to DIN 49073

## Product characteristics

Each button can be used for push-button sensor of contoller functions.

- Backlit LC display
- One or two functons per button
- To be completed with cover kit
- Eight status LED - red, green or blue
- Brightness of status LED and LCD adjustable
- Integrated bus coupling unit
- Connection of extension modules
- Integrated room temperature sensor
- External sensor can be connected
- Room temperature control with setpoint value specification
- Two internal independent controllers for two independent areas - in connection with extension modules
- Display of room or set temperature ( ${ }^{\circ} \mathrm{C}$ or ${ }^{\circ} \mathrm{F}$ )
- Display of outdoor temperature - with external sensor, e.g. weather station
- Display of time, in conjunction with KNX time encoder
- Push-button function or rocker function
- Inhibit function: blocking or change of function of the entire or single button functions
- Alarm function, optional with acknowledge by pressing any button

Flush mounting set
for ceiling installation of KNX presence detector mini
(ref.-no.: 3361 M WW, 3361-1 M WW)
and KNX brightness controller mini
(ref.-no.: 2096 LUX)
to be installed into 68 mm flush box
Design ring $\varnothing$ inside: $35.6 \mathrm{~mm}, \varnothing$ outside: 80 mm
Profile height design ring: 3 mm
Profile height lens: 6.6 mm

## Surface mounting set

for ceiling installation of KNX presence detector mini
(ref.-no.: 3361 M WW, 3361-1 M WW)
and KNX brightness controller mini
(ref.-no.: 2096 LUX)
Dimensions ( $(\times \mathrm{H})$ : $80 / 83 \times 49 \mathrm{~mm}$ (incl. design ring)
Design ring $\varnothing$ inside: $35.6 \mathrm{~mm}, \varnothing$ outside: 80 mm

## Valve drive (motor-operated)

with controller
electromechanical servo drive
ETS product family: Heating, A/C, Ventilation
Product type: Valve
2177 SV R

## Intended use

- Motor-operated valve drive for heating or cooling valves
- To be screwed on valve head

## Product characteristics

- Integrated temperature sensor
- Room temperature control
- Mechanical indication of valve lift
- Automatic detection of valve lift
- One input, can be used as binary input or for an external temperature sensor
- Use in heating circles possible
- Integrated bus coupling unit
- Valve protection function

| with status indicator |
| ETS product family: Input |
| Product type: Binary input |

## Intended use

- Polling of conventional switching or push-button contacts in KNX systems, for reporting of states, operation of loads, etc.
- Mounting on DIN rail according to EN 60715 in distribution boxes

## Product characteristics

- Status LED for each input
- Evaluation of voltage levels and changes at the input
- Transmitting of input status to the bus
- Transmitting behaviour adjustable
- Functions: switching, dimming, blinds up/down, brightness values, temperatures, calling up and saving light scenes, etc.
- Impuls and switch counter function
- Inputs can be blocked separately
- Connection of external AC or DC voltages

1. General provisions
1) The mutual written declarations shall determine the scope of the supplies and services (hereinafter: supplies). However, General Terms and Conditions of Business on the part of the customer shall only apply insofar as we have expressly approved the same in writing.
2) We shall unrestrictedly reserve our exploitation rights under proprietary right and copyright law to cost estimates, drawings and other documents (hereinafter: documents). Such documents may only be rendered accessible to third parties with our prior consent and, upon request, shall, in the event that we should not be awarded the commission, be returned to us without delay. Sentences 1 and 2 shall apply mutatis mutandis to the customer's submissions, though such submissions may be rendered accessible to third parties to whom we have admissibly assigned responsibility for supplies.
3) Partial supplies shall be admissible insofar as the customer may be reasonably expected to accept the same.

## II. Prices and Terms and Conditions of Payment

1) Prices shall be understood to be ex-works excluding packaging and plus the statutory sales tax obtaining at any given time.
2) Packaging shall be invoiced at the lowest possible prices and shall not be taken back. 3) Insofar as nothing is agreed to the contrary, payment shall, irrespective of the receipt of the goods involved, be made to us net within thirty days of the invoice date or within eight days with a $2 \%$ discount In the event that the payment deadline should be exceeded interest shall, without a reminder being equired, be calculated pursuant to $\S 288$ German Civil Code.
3) We shall be entitled to request advance payments in respect of the invoice amounts at any time prior oo the dispatch of goods insofar as we deem such a step to be necessary. Should the customer default on the fulfilment of payment obligations or should the information pertaining to a customer no longer be satisfactory, we shail be entitled to request security for delivered goods or, once a payment deadine has been set, withdraw from the purchase contract.
4) The customer may only offset receivables which are undisputed or have been established on a legally binding basis.

## III. Reservation of title

Goods shall be supplied subject to reservation of title involving the following extensions:

1) All supplied goods shall remain our property until such time as our claims vis-a-vis the customer, including any such claims which may arise from the business link in the future, are settled in full and for such time as the account, including the bill and cheque commitments, has not been settled. This shall also apply in the event that the purchase price for certain deliveries of goods specified by the customer is to be paid. In the case of a current account, the reserved title shall constitute security for our balance claim. 2) The customer shall be revocable and, as long as they fuffil their obligations vis-à-vis ourselves and affording consideration to the following provisions, entitled to sell and process during the normal course of business goods which are encumbered with reservation of title. However, the customer shall be forbidden from pledging or assigning as security goods subject to reservation of title which are supplied or processed. The customer shall, insofar as this is compatible with commercial practices, likewise under take only to resell reserved goods which we have supplied in conjunction with reservation of title. Upon justified request and in the case of default, the customer shall be obliged to apprise us of the name of the third party customer.
2) Insofar as goods encumbered with reservation of title are processed, such processing shall, though without any guarantee on our part, be effected for us. In the event of processing by the customer in conjunction with goods which are not our property, we shall be entitled to co-ownership of the new object at the ratio of the value of the reserved goods to the other processed goods on the processing date, 4) In the event that goods which we have supplied should be combined with other goods, we shall acquire co-ownership of the amount of the ratio of the value of the reserved goods in the combination date.
3) Should the customer sell reserved goods which we have supplied or should such goods be supplied o a third party - irrespective of what value or in which condition - or should such goods be installed within the framework of a work, work performance or a construction contract, the customer shall, until such time as the claims stipulated in subsection 1) are settled in full, hereby assign to us, to the amount of he invoice value of our deliveries, the claim, together with all ancillary rights, including the compensation claims accruing to them from the legal transaction involving the resale or installation, accruing to them vis à-vis their customer or buyer from such sale, delivery or instalment. In the event of an assignment ban obtaining in such work, work performance or contruction contract and in the event of payment defaut, the customer shall undertake to apprise their third party customers of the advance assignment.
4) In the event that reserved goods which we have to supplied should be sold to third parties in conjunction with other goods, we shall be assigned that proportion of the total asking price corresponding to the invoice value of our deliveries.
5) The reservation of title with the extensions pursuant to the above provision shall also remain in force in the event of individual claims against their customer on the part of the customer being included in the current account. In this case, the customer shall, at this early uncture, assign to us the balance obtaining oo their creait. The customer shall, upon request and particularly in the event of payment defaut on the part of the purchaser, be obliged to facilitate the direct assertion of the claims involved and apprise the third party debtor of the assignment.
6) We shall be apprised without delay of any attachment and every kind of restriction which obtain in respect of our property. In the event that the value of the overall collateral stemming from the business link with which we have been furnished should exceed our delivery claims by more than $20 \%$, we shall, at the request of the purchaser, be obliged to reassign the assigned claims to such extent
7) In the event of any incidence of damage or other impairment to the equipment supplied on the basis of our terms and conditions, the purchaser shall, at this early juncture, assign to us in advance the compensation claim accruing to them vis-à-vis the insurer from their insurance to the amount of the incidence of damage in question to our reserved property.

## IV. Deadline for deliveries; default

1) The deadline for deliveries or services shall commence on the day on which written agreement pertaining to the order in question obtains between the customer and ourselves. The observance of such deadline shall presuppose the prompt receipt of all the documents, requisite licences and releases to be furnished by the customer, the prompt clarification and approval of the plans and the observance of the agreed Terms of Conditions of Payment and other obligations. Should these prerequisites not be fuffilled on time, the delivery deadline shall be extended by an adequate period of time; this shall not apply in the event that we should be responsible for a delay.
2) Should the non-observance of deadlines be attributable to force majeure, such as mobilization, war civil commotion or similar occurrences, e.g. strike or lockout, delivery deadlines shall be extended by adequate periods of time.
3) In the event that dispatch or delivery should, at the behest of the customer, be delayed by more than one month following notification of dispatch readiness, the customer may, for every started month, be invoiced storage costs to the amount of $0.5 \%$ of the price of the delivery objects, though no more than a total of $5 \%$.
The contracting parties shall be at liberty to prove that lower or higher storage costs have accrued
V. Transfer of risk

The risk shall also pass to the customer in the event that carriagepaid delivery should have been agreed. In the absence of a written arrangement to the contrary, dispatch shall always be effected according to our best judgement. We shall not assume any responsibility for transportation at market prices. We shall only arrange transport insurance policies the costs of which are borne by the purchaser upon express, written agreement.

## VI. Acceptance

The customer may not refuse to accept deliveries on the grounds of the existence of minor defects.
VII. Material defects

1) The prerequisite for the assertion of material defects liability shall be the submission to us or our authorized representative of proof of acquisition (delivery note, invoice, etc.). The warranty entitlement may not be transferred to third parties without our consent.
2) All those components or services shall, as we see fit, be repaired, resupplied or refurnished which feature a material defect within the limitation period - irrespective of operating life - insofar as the origin of the same obtained at the point in time of transfer of risk.
3) Material defects claims shall lapse after twelve month. This shall not apply insofar as the law pursuant to §§ 438, paragraph 1, no. 2 (constructions and objects for constructions), 479, paragraph 1 (claim under a right of recourse) and 634a, paragraph 1, no. 2 (construction defects) German Civil Code makes provision for longer periods of time, in instances of iniury to life, body or health, in the event of a wilful or grossly negligent breach of duty on our part and in the event of the malicious nondisclosure of a defect. The statutory provisions pertaining to the suspension of the running of a period, suspension and recommencement of periods shall remain unaffected.
4) The customer shall submit complaints pertaining to material defects to us in writing without delay 5) In the event of notifications of defects, payment on the part of the customer may be withheld on a scale which is in a reasonable ratio to the material defects which have occurred. The customer may only withhold payments should a complaint be asserted the justification of which is beyond doubt. Should a complaint have been submitted without justification, we shall be entitled to request the that customer reimburse the costs which we incurred.
5) In the first instance, we shall be granted the opportunity to effect subsequent fulfilment within a reasonable period of time.
6) Should such subsequent fuffilment be unsuccessful, the customer - any compensation claims pursuant to subsection IX notwithstanding - may withdraw from the contract or reduce the amount of payment.
7) Claims arising from defects shall not obtain in respect of a minor deviation from an agreed quality, a minor impairment to usefulness, natural wear and tear or incidences of prejudice which arise subsequent to the risk transfer in consequence of faulty or negligent handling, exessive strain, unsuitable operating facilities, faulty construction operations, unsuitable subsoil and, in particular, any external influences which are not presupposed by the contract, as well as in respect of non-reproducible software defects.In the event that modifications or maintenance operations should be improperly performed by the customer or any third parties, it shall likewise be the case that no claims arising from defects shall obtain for such modifications and maintenance operations or any resulting consequences.
8) Any claims on the part of the customer for expenditure which it is necessary to incur for subsequent fulfilment purposes, particularly transport, travelling, labour and material costs, shall be excluded insofar as such expenditure increases due to the fact that a delivery object has been subsequently transported to a location other than the customer's business premises unless such transportation is in line with the normal utilization of such object
9) Claims under rights of recourse vis-à-vis ourselves on the part of the customer pursuant to $\S 478$ German Civil Code (contractor's recourse) shall only obtain insofar as the customer has not agreed any arrangements with their customer exceeding the scope of the statutory claims arising from defects. No. 9 shall additionally apply mutatis mutandis to the scope of the customer's claim under a right of recourse vis-a--vis ourselves pursuant to § 478, paragraph 1 German Civil Code.
10) It should be noted that subsection IX (other compensation claims) shall apply to compensation claims. Any more farreaching claims for a material defect against us and our vicarious agents on the part of the customer and any claims for a material defect against us and our vicarious agents on the part of the customer other than those stipulated in subsection VIII shall be excluded.

## VIII. Impossibility, contractual revision

1) Insofar as a delivery is impossible the customer shall be entitled to claim compensation unless we are not responsible for such impossibility. However, the customer's entitlement to compensation shall be restrictes to $10 \%$ of the value of that component of the delivery which cannot be put into appropriate operation in consequence of such impossibility. This entitlement shall not apply insofar as, in cases of wilful intent, gross negligence or injury to life, body or heath, compulsory liability obtains; this shall not entail a change in the burden of proof to the detriment of the customer. The right of the customer to withdraw from the contract shall remain uneffected.
2) Insofar as any unforeseeable occurrences within the purport of subsection IV, no. 2 considerably alter the economic importance or the object of a delivery or exercise a major influence on our operations, the contract shall be suitably revised in compliance with the principle of good faith. Insofar as this is not economically justifiable, we shall be entitled to withdraw from the contract. In the event that we should wish to exercise this right of withdrawal, we shall apprise the customer accordingly without delay upon becoming cognizant of the implications of the occurrence in question, including in the event that an extension of the delivery period should initially have been agreed with the customer.

## IX. Other compensation claims

1) Claims for compensation and claims for the compensation of expenses (hereinafter: compensation claims), irrespective of on which legal grounds, particularly for a breach of the duties arising from the contractual obligation and for tortious acts, shall be excluded
2) This shall not apply insofar as compulsory liability obtains, e.g. pursuant to the Product Liability Act, in cases of wifful intent, gross negligence, injury to life, body or health and a breach of major contractual obligations. However, a claim to compensation for a breach of major contractual obligations shall be restricted to the contractually typical, foreseeable prejudice insofar as wifful intent or gross negligence do not obtain or liability obtains due to injury to life, body or health. The above stipulations shall not entail a change in the burden of proof to the detriment of the customer.
3) Insofar as the customer is entitled to compensation claims pursuant to subsection IX, such claims shall lapse upon the expiry of the limitation period pursuant to subsection VII, no. 3 applying to claims for material defects. In the case of compensation claims pursuant to the Product Liability Act, the prevailing statutory limitation provisions shall apply.

## $X$. Diagrams, measurements and weights

## Diagrams, measurements and weights shall always be regarded as approximate.

## XI. Place of performance, place of jurisdiction and applicable law

1) Insofar as nothing to the contrary is agreed, the place of performance shall be Schalksmühle. 2) In the event of the customer being a businessman, the sole place of jurisdiction for all disputes arising directly or indirectly from the contractual relationship shall be Hagen. However, we shall also be entitled to institute legal proceedings at the place of domicile of the customer.
2) German substantive law shall, to the exclusion of the UN Convention on Contracts pertaining to the International Sale of Goods (CISG), apply to the legal relations obtaining in connection with this contract
XII. The remaining provision of the contract shall continue to have binding force even in the event of the legal invalidity of any of the individual provisions contained in the same. This shall not apply in the event of adherence to the contract constituting unreasonable hardship for one of the contracting parties.
