OBJECT: ELECTRIC WIRES ON THE LED VERSION OF OLÀ COLLECTION

Dear Partners

2016 ECLETTICA catalogue introduced several new products, including the entire OLA series with LED lighting system.

Concerning the overall layout and size of individual items, there are no significant changes compared to the traditional lighting version.

However, some technical requirements oblige us to use for the LED version (LED LIGHTING) only electric cables with transparent sheath, instead of colored cables that are used in the traditional version (STANDARD LIGHTING).

Please therefore take note of this communication and forward it to your customers in order to avoid misunderstandings in the order confirmations.

Here below, for example, the 2 versions of OLA' S6 OV160 with coloured and transparent cable .

We remain at your disposal for any further information.
